RESUMO PROFISSIONAL

Data Scientist with 12+ years of experience in tech, specializing in engineering data pipelines, process automation, and developing Machine Learning models. Proven track record of leveraging Python, SQL, Databricks, and PySpark to drive a reduction in operational costs and an increase in operational efficiency. Strong ability to translate complex business requirements into scalable data solutions, delivering executive dashboards (Power BI) and predictive models that boost commercial growth.

HABILIDADES TÉCNICAS

- Languages & Data Engineering: Python, SQL, PySpark, Databricks, AWS, Azure, GCP, ETL
- Machine Learning & Statistics: Supervised/Unsupervised Models, GenAI, LLMs, NLP, Prompt Engineering, Classification
- Data Visualization & BI: Power BI, Tableau, SAP HANA, Dashboard Development
- Business & Governance: COBIT, KPI Tracking, Data Governance, Problem-solving

EXPERIÊNCIA PROFISSIONAL

Data Scientist | Secretaria da Educação do Estado
de São Paulo

04/2025 – Present

- Application of data science and AI to public policies, transforming data from millions of students across schools into analytical intelligence for Brazil's largest state education network.
- Implementation of Databricks AI Functions (LLMs via SQL) and NLP for entity extraction, automated urgency classification, and large-scale anonymization of sensitive data (PII).
- Design of advanced system prompts and construction of semantic knowledge bases, enabling the operation of AI assistants and analytical self-service chatbots.
- Development of composite indexes and multicriteria scoring models, such as the School Vulnerability Index, directly impacting psychological support and leadership selection processes.
- Creation of predictive models for food demand estimation across the schools, alongside the structured delivery of Delta tables/views in several strategic projects.

Data Analyst & AI | Cheil Brasil

02/2023 – 04/2025

- Structured and scaled a new data analytics department, developing executive Power BI dashboards and generating insights that supported an increase in sales.
- Automated high-demand seasonal processes using Python and SQL ETL routines, decreasing field resource requirements.
- Implemented predictive models focused on sales and operations, enhancing the accuracy of KPI tracking and business forecasting.

IT Project Supervisor (Data & Infra) | Samsung SDS

10/2021 – 11/2022

- Led sales forecasting and commercial KPI analysis, generating higher accuracy in forecasts that drove the renewal of 20+ projects across the LATAM region.
- Optimized the IT portfolio management process, resulting in a reduction in operational costs while maintaining quality standards.

Cloud & DevOps Specialist | Banco Hyundai Capital Brasil

02/2020 – 09/2021

- Processed and transformed raw data into risk reports and actionable insights, improving the business team's decision-making capabilities.
- Optimized Cloud architecture and resources, achieving a reduction in operational costs and ensuring compliance with security audits.

IT Support and Project Analyst | Samsung SDS

10/2017 – 02/2020

- Performed data extraction and ETL workflows in MySQL and SQL, mapping trends and automating tracking to reduce operational incidents and systemic failures.

FORMAÇÃO ACADÊMICA

MBA in Data Science - FIAP

2023

Postgraduate in IT Governance - Universidade
Presbiteriana Mackenzie

2022

Bachelor in Information Systems - Universidade
Presbiteriana Mackenzie

2014
